AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) A system for providing voice and data services over a wired data network and over a regulated wireless network, the system comprising:

a <u>first</u> wireless network including one or more <u>at least one</u> wireless access points <u>point</u> wired to the wired data network, the <u>at least one</u> wireless access points <u>point being</u> operative to provide wireless access to the wired data network over an unregulated wireless connection; and

one or more <u>at least one</u> digital cordless <u>handsets handset</u> for communicating with the <u>at least one</u> wireless access <u>points point</u> via the unregulated wireless connection in order to provide the voice and data services.

- 2. (Currently Amended) The system of Claim 1, wherein the <u>first</u> wireless network is operated by a first provider, wherein the system further comprises a second wireless network operated by a second provider, and wherein the <u>at least one</u> digital cordless handsets are <u>handset is</u> further operative to interoperate between the <u>first</u> wireless network and the second wireless network.
- 3. (Currently Amended) The system of Claim 1, wherein a-one-of the <u>at least</u> one digital cordless handsets <u>handset</u> is operative to communicate with the wired data network via any one of the <u>at least one</u> wireless access points.

4. (Currently Amended) The system of Claim 3, wherein a-one-of the <u>at least</u> one digital cordless handsets <u>handset</u> is operative to switch between any-two-of the <u>at least</u> direct wireless access points point and a second wireless access point during voice or data communication.

- 5. (Currently Amended) The system of Claim 4, wherein switching between any-two-of the first wireless access points point and the second wireless access point comprises exiting a wireless transmission area of [[a]] the first wireless access point and entering a wireless transmission area of [[a]] the second wireless access point.
- 6. (Currently Amended) The system of Claim 4, wherein the <u>at least one</u> digital cordless handsets-centain <u>handset contains</u> identification information, and wherein the identification information is transferred from the <u>first</u> wireless network to the wired <u>data</u> network where it is determined what voice and data services to provide based on the identification information.
- 7. (Original) The system of Claim 1, wherein the unregulated wireless connection is an IEEE 802.11b connection.

8. (Original) A method of providing voice and data services over a wired data network, comprising:

detecting a digital cordless handset in range of a wireless access point over an unregulated wireless connection, wherein the wireless access point is wired to the wired data network; and

providing for incoming calls to and outgoing calls from the digital cordless handset and through the wired data network.

- 9. (Currently Amended) The method of Claim 8, further comprising: obtaining identification information from the digital cordless handset; and determining the voice and data services to provide to the digital cordless handset over the wired data network based upon the obtained identification information.
- 10. (Currently Amended) The method of Claim 8, further comprising assigning an IP address to the digital cordless handset upon detecting the handset being in range of the wireless access point, and wherein providing for incoming and outgoing calls comprises establishing a VoIP session between the digital cordless handset and the wired data network through wireless access point.
- 11. (Original) The method of Claim 10, wherein providing for incoming calls comprises detecting an IP address corresponding to a telephone number that is called and wherein the VoIP session is established with the digital cordless handset that is assigned the IP address corresponding to the telephone number.

- 12. (Original) The method of Claim 10, wherein providing for outgoing calls comprises establishing the VoIP session when receiving a dialed number at the digital cordless handset and completing a call to the party corresponding to the dialed number.
- 13. (Original) The method of Claim 8, wherein the unregulated wireless connection is a bluetooth connection.
- 14. (Currently Amended) A system for providing voice and data services over a wired data network, the system comprising:

a broadband residential gateway comprising a first network device for communicating with the wired data network, a second network device for providing a communications link to ene-or-more at least one wired network devices device over a local wired network, and a wireless access point operative to provide wireless access to the wired data network over an unregulated wireless connection; and

with the one-or-more wireless access points point via the unregulated wireless connection in order to provide the voice and data services.

15. (Currently Amended) The system of Claim 14, wherein the one or more at least one wired network devices-comprise device comprises one-or-more at least one digital wired handsets for communicating with the wired data network in order to provide the voice and data services.

16. (Original) The system of Claim 15, wherein the local wired network comprises a home phone networking alliance network.

- 17. (Currently Amended) The system of Claim 15, wherein the wired data network is operative to generate a telephone call directed toward the broadband residential gateway and wherein the telephone call may be answered on any-of the at least one digital cordless handsets handset or any-of the at least one digital wired handsets handset.
- 18. (Currently Amended) The system of Claim 15, wherein the broadband residential gateway is operative to generate a telephone call directed toward the wired data network and wherein the telephone call may be initiated on any of the <u>at least one</u> digital cordless handsets handset or any of the <u>at least one</u> digital wired handsets handset.
- 19. (Currently Amended) The system of Claim 15, wherein the system further comprises a directory information database and wherein any of the <u>at least one</u> digital cordless handsets <u>handset</u> or <u>any of</u> the <u>at least one</u> digital wired <u>handsets handset</u>
 [[are]] <u>is</u> operative to access directory information provided by the directory information database.

20. (Currently Amended) The system of Claim 14, wherein the <u>at least one</u> digital cordless handsets-transmit <u>handset transmits</u> a user identifier to the wired <u>data</u> network and wherein the system further comprises a restriction database of the wired <u>data</u> network that applies rules to telephone calls of the <u>at least one</u> digital cordless handsets <u>handset</u> based on [[the]] <u>a</u> user of the <u>at least one</u> digital cordless handset.

- 21. (Currently Amended) The system of Claim 14, wherein the system further comprises a web interface at a personal computer linked to the wired <u>data</u> network, wherein the web interface provides for entry of administrative information for providing the voice and data services over the wired data network.
- 22. (Original) The system of Claim 12, wherein the unregulated wireless connection is an IEEE 802.11b connection.
